fish to hold water in the tin for travel. The fish are meant ot hold a single serving of soy sauce and are on Amazon.

The second tin I made has deeper areas for paint. It has higher side walls. I thought that would help hold in moisture and prevent the tin from rusting.I've seen people also paint the inside with enamel to use the lid as a mixing area and to preserve the metals. I have not yet printed this version as I'm having problems printing as I am a bumbling novice. I noticed the paint wells are not perfectly spaced but I'll have to watch more YouTube videos to figure out how to move and space objects.

- 10/08/17 I deleted the second file and replace it with one that had deeper corners as the other was just a little tight. I also rotated it flat on the bed so some parts wouldn't sag.
